Overview

The RegCheck API is a SOAP based ASP.NET ASMX webservice that permits the lookup of vehicle details across many countries, including UK, Ireland, Finland, Netherlands, Norway, Sweden, Portugal, Italy, France, Spain, Australia, the USA and others.

The API endpoint is located at https://www.regcheck.org.uk/api/reg.asmx , with the WSDL definition available here https://www.regcheck.org.uk/api/reg.asmx?wsdl . You will require a username to access the API, and a username and password to access your account via the login link on the front page- You can get a test account and 10 free credits once you have verified your email address.

Although the XML schema of the data will remain consistent across all countries, the amount of data returned will vary from country, and sometimes may vary based on an underlying provider, for instance, in Finland, it is possible to determine the insurance company that insures the vehicle from the API, but this data is unavailable in other countries.

The XML returned from the web-service contains an element named "**vehicleJson**" which contains the details of the vehicle encoded in JSON format, this is designed to make the service easier to consume from Javascript based clients. The format of this JSON is standardised, but is expandable based on extra data that may be available in certain countries.

You can log into the API console by going to any of the websites associated with this service, for example www.regcheck.org.uk and selecting login at the foot of the page. From the dashboard you can see how many credits you have left, view a graph of usage, purchase more credits via paypal, and set parameters such as your low balance warning.

Your low balance warning is a level at which you wish to receive an email reminding you to top up. Once your balance reaches zero, no further requests can be made. You can also contact us to ask for a daily limit, so that you do not use more than a certain number of credits in any given day.

For added security, you can request that API access on your account is locked to a defined set of IP addresses. By default, accounts can be accessed from anywhere, but if you would like added security, you can request that access is locked to a certain set of IP addresses.

If you need programmatic access to your credit balance, then you can request the url: https://www.regcheck.org.uk/ajax/getcredits.aspx?username= followed by your username. If this shows a zero or negative value, you are out of credits.

Each country has a test number plate, which can be queried free of charge, this can be useful during the development, so that you do not have to use your credits for basic testing.

Certain countries, such as Denmark, Sweden and Norway have offline data available, this means that we hold complete vehicle data for that country on our own servers.

UK MOT History

All UK cars, can have their MOT service history checked through the web service call “UK MOT”.

Note that the “model” parameter is no longer required, it is for backwards compatibility only.

The data returned includes the Test Date, the Result (Pass or Failure), the Odometer reading, the test number, and in the case of a failure, a list of failures in plain text, a sample node would be as follows;

```
<UKTest>
  <TestDate>8 November 2016</TestDate>
  <Result>Fail</Result>
  <Odometer>61,703 miles</Odometer>

Australia support

Vehicles in Australia use the /CheckAustralia api endpoint.

Unlike the other countries, Australia offers a third parameter, which is State. This parameter should contain the 2-3 letter abbreviation of the australian state to where the vehicle is registered, those are NSW (New South Wales) and VIC (Victoria), QLD (Queensland incl. North Queensland), SA (South Australia), ACT (Canberra), NT (Northern Territory), WA (Western Australia) and TAS (Tasmania).

The data returned from each state varies, and you can expect the following data from each State:

NSW (New South Wales)

- Description
- Make
- Model
- Registration Year
- Colour
- Body Style
- Nevdis code
- Engine size
- NVIC (National Vehicle Identification Code)

USA support

The USA requires two parameters, the registration number, and the state where the vehicle was registered. The state is a two letter abbreviation of one of the 50 states, or DC (District of Columbia), GU (Guam), PR (Puerto Rico) or VI (Virgin Islands). You use the /CheckUSA endpoint.

It returns the following information about the vehicle

- Description
- Body Style
- VIN
- Engine Size
- Country of Assembly

India support

Unlike many European countries, not all cars in India are digitally registered, and in order for a car to be returned by this API it must be registered with VAHAN (https://vahan.parivahan.gov.in/vahanservice), of which there are almost 290 million vehicles registered. Furthermore, some imported cars from non-indian manufacturers may have very limited technical information about the car.

In order to call the API you should call the /CheckIndia endpoint, and you can expect the following information back in the JSON

- Make
- Model
- Engine Size
- Year of first registration
- VIN (Chassis Number)
- Location

German support

Unlike other countries listed above, the German API accepts KBA numbers instead of number plates. A KBA number (“Kraftfahrt-Bundesamt”) is a unique number which is registered with the Federal Motor Transport Authority. The KBA number can be found on the vehicle registration in boxes 2 and 3 or in the registration certificate Part 1 under 2.1. and 2.2.

A minimal service which can check if a German License plate is available for registration is available here; https://rapidapi.com/infiniteloop/api/german-license-plate-availability

The data can be purchased in bulk from here https://payhip.com/b/PqsL for import into your own database.

This API is accessed via the /CheckGermany endpoint, where KBANumber is in the format HSN/TSN (Herstellerschlüsselnummer / Typschlüsselnummer), it returns the following data:

- Make & Model

- Engine Size in KW and HorsePower (PS)
- Engine Capacity
- Fuel type
- Representative image

}
```

Wheel Size data

This API has been deprecated. Please contact us for alternative sources.

Implementation

The most simple implementation is via .NET (C# or VB.NET)

1. Create a new Project - eg. a C# Console application
2. Right click Add Service reference
3. Click Advanced
4. Click Add Web Reference
5. Add https://www.regcheck.org.uk/api/reg.asmx into the address box
6. Click Add Reference
7. Add the following code;

```
CarReg client = new CarReg();
Vehicle car = client.Check("YY07XHH", "** Your username**");
Console.WriteLine(car.vehicleData.Description.Text[0]);
Console.ReadLine();
```

Alternative Implementations

If you wish to consume this webservice from PHP, then you can use a simple HTTP GET implementation as follows:

```
<?php

    $username = 'Your username here';

    $regNumber = 'SK08KPT';

    $xmlData =
file_get_contents("https://www.regcheck.org.uk/api/reg.asmx/Check?Reg
istrationNumber=" . $regNumber  ."&username=" . $username);

    $xml=simplexml_load_string($xmlData);

    $strJson = $xml->vehicleJson;

    $json = json_decode($strJson);

    print_r($json->Description);

?>
```

For Java developers, here is a blog post that shows an example of how you could call the API: https://blog.dotnetframework.org/2016/01/25/call-an-asmx-webservice-from-java/

Beta features

Certain APIs that have been specifically developed for customers, or are simply a work in progress can be accessed via our Bespoke API endpoint at https://www.regcheck.org.uk/api/bespokeapi.asmx

Although these APIs may be subject to change, and are not regularly tested, you may find some interesting data here.

EuroNCap Data

EuroNCap is a european car testing standard, and if you would like to get the car safety ratings for a vehicle, then you can access the /CheckEuroNCap endpoint on the bespoke API, it is free to use, and requires the make, model and valid account username.

It returns XML data in this format:

Future additions

I. Schema changes

We endeavour to keep the web service stable and we are aware that your implementation may depend upon certain features of our API. Certain aspects of the feed such as the JSON returned in the VehicleJson field, may be added to, or certain country-specific fields may be removed if they cause errors in core functionality.

We keep a constant eye on server uptime, but outages may happen, if this happens, then please feel free to contact us. We try our best not to bill credits during an outage, but if this happens, we will gladly refund any erroneously debited credits.

In the future, we hope to add more countries. If you need a new country that we don't support yet, let us know!

II. Working with us

If you develop something cool using our API, then we'd be really happy to spread the word to our social media followers - email us, or get us on X at @webtropy If you want to exchange links, then we'll consider this, if you're a paying customer.

Insurance providers, or other complimentary services that offer an affiliate program can get in contact with us, and we would be happy to include this on our app.

We use this API internally on our RegCheck App, which you can get on iOS at

https://itunes.apple.com/ke/app/car-check-uk/id463823472?mt=8
